Try checking on ucsd.edu in the hamradio directory, I think

there is a Baycom subdirectory there.

To: ham-digital@ucsd.edu

I'm looking for a public domain or shareware terminal program for the IBM PC to use with a multimode controller for PACKET/AMTOR and RTTY.

Yes, I know any terminal emulator will work but I'd like to find a program with features like split windows for send/receive, etc.

I have a list of programs for the Mac but not the IBM.

If you have any information or suggestions, please let me know via e-mail. If there is sufficient information, I will post a summary.

Thanks and 73.

I have a friend that would like to get into packet/digital and has an apple II. Before he buys a tnc he was wondering if there was any software that he could buy or is available for the apple that might support one or another of the tnc's better than another. I looked at ftp.apple.com, but all their stuff seems to be Mac oriented.

Does anyone know of such software available today?

Thanks,
Jim.
